🌻 !1060- Canonical workflow

🗓 22 Sep 2025

Explore your factors by autoclustering them. What ideas stand out robustly under different settings and make sense for your study?

The auto label button 🪄 now suggests labels for all your clusters at once (ensuring they are distinct from one another) and automatically pastes them into the magnetic labels panel, *appending them after any existing magnetic labels*. This way you can build up a comprehensive label set, step by step.

However, the “ignore magnets” setting isn’t quite right yet.

You can use the `Manage` button to see all the contents of each of your clusters - either magnetic or autocluster, whichever is last in the order in which you applied your filters.
