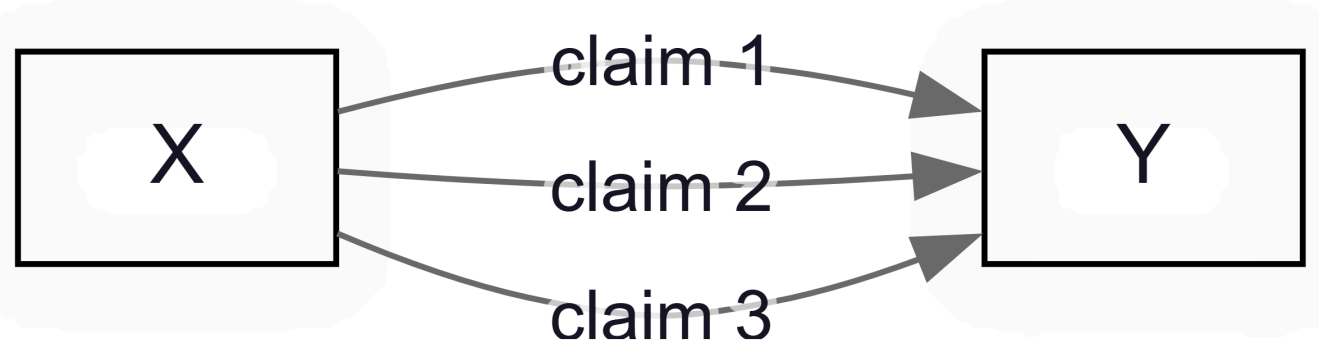
Bundle of Links – definition

Chapter contents.

At Causal Map, we call the individual links just "links" and we call the collection of multiple "co-terminal" links, i.e. the set of links starting at X and finishing at Y, a "bundle of links" or a "links bundle" or just a "bundle". In the special case where there is only one link in the bundle, then the link = the bundle.



Three causal claims making up a bundle
