🌻 Intro – deductive auto-coding

Chapter contents.

15 Oct 2025

> Causal coding is fascinating but can take a lot of time. Using AI to help you is pretty easy, especially if you provide a codebook of factor labels which the AI has to use, as we will explain in this chapter, when we've finished it!

Using a pre-defined codebook is simple. If you instead let the AI invent its own labels, you have to worry about how to combine all the hundreds or even thousands of labels which it might create. The following chapter looks at what happens when you do *not* provide a codebook: Introduction to inductive auto-coding

PAGES IN THIS CHAPTER

The deductive autocoding prompt

> Question: *I already have a codebook I want the AI to use. How to work this codebook into the prompt?*
