

VIGNETTES – WHAT IS A TYPICAL SOURCE AND WHAT IS THEIR STORY ?

Source: TWX-1

Since the training on mothers group I started eating new things such as eggs and mixture of soya and margarine and juices for consumption on day to day in my house. 'Increased knowledge' influences

[Wellbeing improved because...] For example nowadays, I do not get sick as much as before, than to help my family as well. 'Health behaviour' influences 'Improved health'

We had changes in the agricultural practice we started using the same lines but now with correct seeds and medicines on my crops to last longer; and after putting the medicines I place in package. Before I was in the mothers group belonging to Organisation 2 Project. The use of fertilizers made positive change in 'techniques' influences 'Farm production'

The way of eating changed significantly due to the training held by mothers group on the importance of

Writing the story for a typical source helps to create an engaging 'human' story, bringing your data to life, providing a **tangible example** that represents the broader trends in your dataset.

There are different ways to do this. One way is to apply an algorithm to the links database to identify the most typical source, and then to construct a **short story** to illustrate the map, complete with quotes from that source.

This is available in Causal Map using non-AI algorithms to identify the most typical source and then applying a simple genAI prompt to create a story based on that source's data.
