

★ INCLUDE CAUSAL MAP AND QUALIA INTERVIEWS IN YOUR NEXT BID

Preparing a bid? Need to apply a "causal lens"?

Research and evaluation consultancies are increasingly getting asked to "apply a causal lens". Sometimes that's possible with quantitative data. But how to rigorously identify, synthesise and visualise causal narratives within **qualitative data** like interviews and reports?

That is what **causal mapping** is for. At **Causal Map Ltd.**, we can provide that expertise.

Two ways to use causal mapping:

- As a **light overarching framework** for your entire project. Assemble a database of causal evidence from different kinds of sources like interviews and reports. Make sense of it at scale (we can use AI for this, but in a structured and robust and checkable way).
- **Just as one part** of your project, to **answer specific questions...**

Questions you can answer

- **How does the whole system work**, according to your sources? How is it **changing**? Where are the leverage points?
- What's the evidence that our intervention led to **expected outcomes**, and how?
- What **unexpected outcomes** were there?
- Does the **reality** match the plan?
- Do the young people see this **differently**?

💡 Tip: add **conversational AI-led interviews** to your bid: see the next page.

- chapter intro

Interviews are **deep but expensive**. Questionnaires are **cheap but shallow**.

Qualia is our AI interviewer. Qualia can conduct conversational interviews with any number of respondents, in almost any language.

We find that respondents are on average more candid with Qualia than with a human interviewer. As with any data collection, some respondents drop off right at the start. But we find that once they start talking, they mostly can't stop (!), producing transcripts of multiple pages.

Put Qualia in your next bid:

- Conduct some KIs face-to-face and then get Qualia to follow the same interview guideline but extending your reach to dozens or hundreds of stakeholders.
- Why bother with a traditional questionnaire when you can use Qualia to find out what people are **really** thinking, but at the same scale?

Qualia interviews are very cost-effective. Often, clients engage us for a day or two to help with setting up and monitoring the interview.

You get an automated report. Or download the transcripts for further analysis. Or we can use Causal Map to make sense of the stories at scale.

You can set your Qualia interviews to be **fully GDPR-compliant**: no data leaves the EU, not even for AI processing; no data is stored outside our own EU servers and no data is used to train models.
