This note is being edited on mist. Avoid editing it here in Obsidian until the review is finished, or your local changes may be overwritten.

At Causal Map, we call the individual links just "links" and we call the collection of multiple "co-terminal" links, i.e. the set of links starting at X and finishing at Y, a "bundle of links" or a "links bundle" or just a "bundle". In the special case where there is only one link in the bundle, then the link = the bundle.

Three causal claims making up a bundle
