

WHICH FACTORS AND LINKS ARE MENTIONED BY THE MOST SOURCES ?

Factor 	# Citations 	# Sources 	In-Degree 	Out-Degree 	Outcomeness 
Farm production	46	13	24	22	0.522
Improved health	24	17	24	0	1.000
Increased knowledge; ...	23	11	0	23	0.000

The number of citations can be a useful measure of importance, but it can be distorted if one source mentions some factor a lot of times. A useful alternative is to count the number of *sources* that mentioned a factor or link at least once.
