The left and right panels

The app uses a two-pane layout with a draggable border between them (default split 30:70).

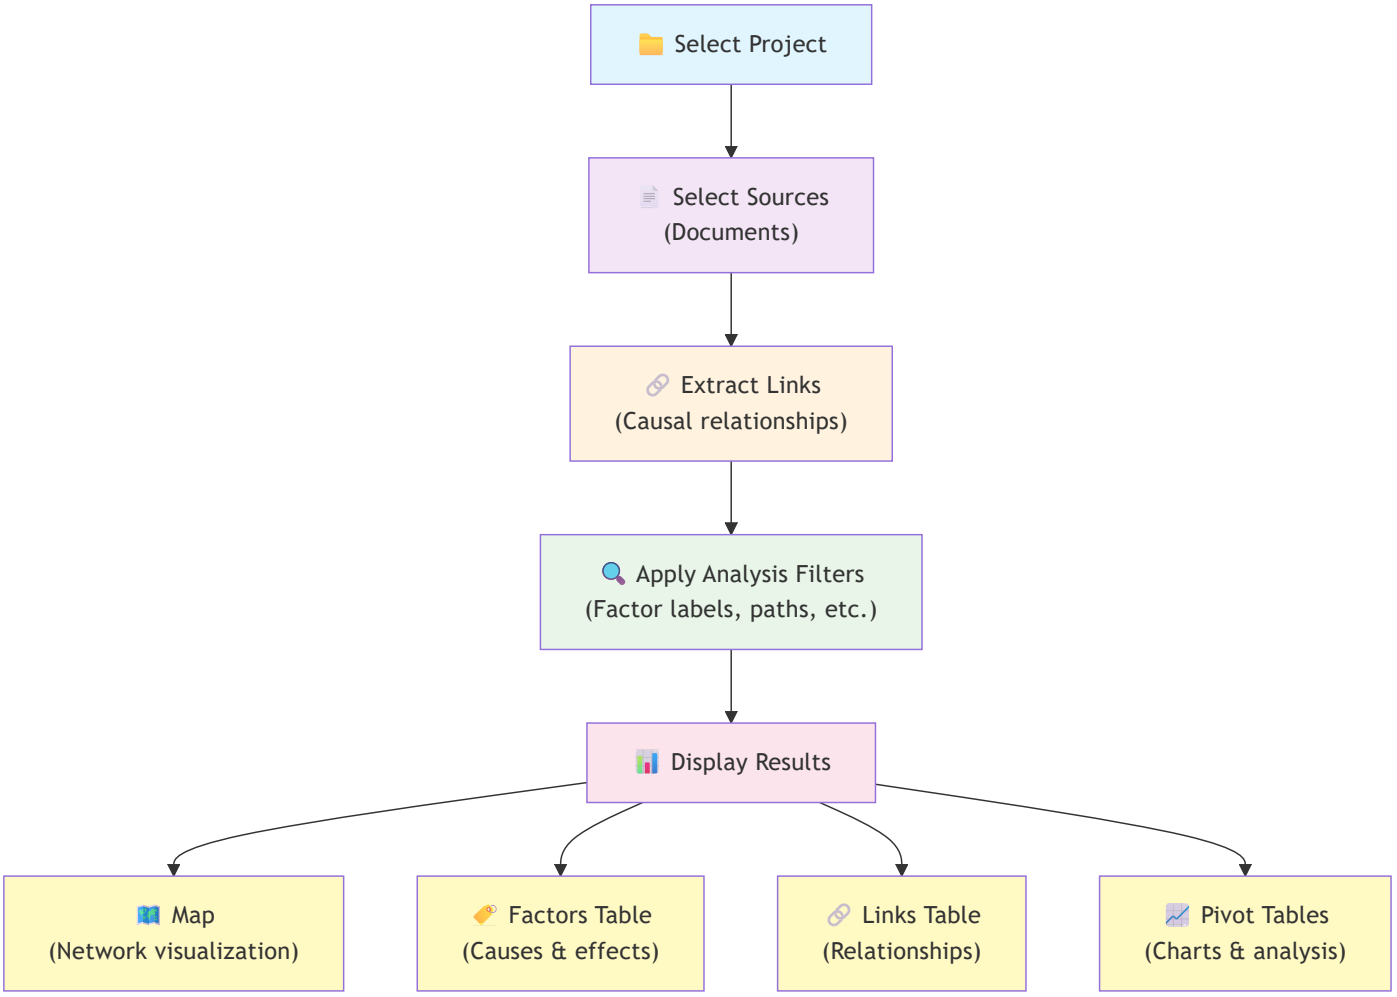

> The left hand side of the app is all about selecting sources then creating and filtering links.
>
> The right hand side (the pink tabs) is all about presenting the results.

Left-hand side

- Project Dropdown Menu: select a project including its links and documents
- Sources Dropdown Menu: choose one or more sources. **(Leaving it empty includes *all* sources).**
- Create Links tab: Read and code source text. In the **Source text** header you get current source ID, source info toggle, source Prev/Next, highlight navigation, and Help. If **two or more** sources are selected, a small **pen-to-square** icon on a pill in the Sources dropdown marks which source is open in the viewer.
- Filter Links tab: Do qualitative causal analyseis on the selected links by filtering and manipulating them.

The Links Pipeline

The diagram shows the Links Pipeline: The top four boxes here correspond to the left side of the app and are called the "Links Pipeline": each step selects and filters links. The resulting links are then displayed in the pink output tabs on the right side.

Right-hand side (pink tabs)

- Outputs: these all show the same filtered links from the Links Pipeline but in different formats
  - Map: visual network of links
  - Factors: editable factor list (toggle available to bypass analysis filters)
  - Links: editable links table (toggle available to bypass analysis filters)
  - Pivot Tables: additional analysis and charts

Right-hand side (other tabs)

The right-hand side also contains other tabs not influenced by the pipeline:

- Help: help drawer and docs
- Projects: manage projects
- Sources: manage sources
- Settings: application preferences
- Account: your account
- Logs: application logs
- Bookmarks: saved views
- Responses: AI logs and usage
