

ORDINARY PAGE LAYOUT DEMO

📅 8 May 2026

This note is in 991 !!! just my notes. There is **no type: article** and **no tags: paper** — so you get the **default garden** look: sunflower-friendly layout, **no** automatic blue banners on every ##, and **blockquote**s stay **blockquote**s (not converted to paper “note” callouts).

Manual styling

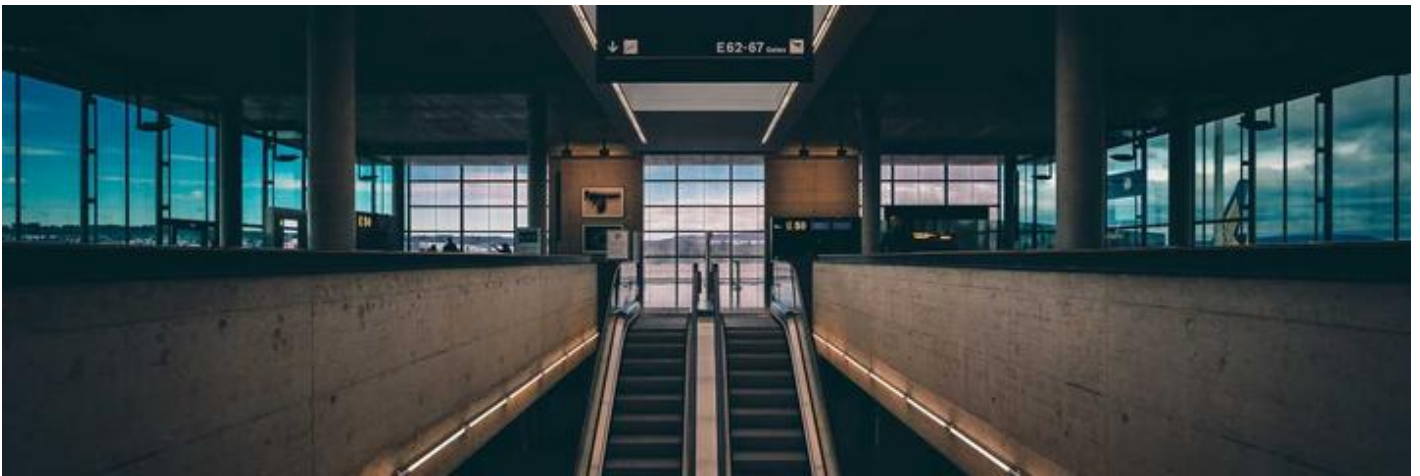

If you want banner / rounded headings on a **non-paper** page, add classes yourself — this ## line uses `{.banner-info}` explicitly.

Manual rounded box

Explicit **callout** syntax still works on any page: opening line `--{.tip}` and closing `--`.

Default images on a single-column page

On an ordinary page, images are **full width of the content column** unless you override.

`{.inline}` — smaller / natural width (still capped at 100% of the column):

`{width=...}`:

`{style="..."}`:

Section-level two columns

Add `{.two-col}` at the **end** of the `##` line (Pandoc attribute block — **not** inside backticks) so content below splits into two columns until the next heading.

Column A: Same image rules — default fills the **half-column** width unless you use `{.inline}`, `width=`, or `style=`.

Column B: `{.span-cols}` only “means something” when there are real CSS columns; here it should span **both** section columns.

Compare with the sibling demo note

Open `010 Article type layout demo` in the same folder: same image attributes, but with **automatic paper/article heading treatment** and optional `dual-column` in YAML.
